To His Honour the Lieutenant-Governor of the Province of Ontario.

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Fifty-fifth Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario, during the year 1924.

Respectfully submitted,

LINCOLN GOLDIE,
Registrar-General of Ontario.

SIR:—

I have the honour to submit for your approval the Fifty-fifth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1924.

I have the honour to be, Sir,

Your obedient servant,

Deputy Registrar-General.

TO THE HON. LINCOLN GOLDIE,
Registrar-General of Ontario.

REPORT UPON
Births, Marriages and Deaths
FOR THE YEAR 1924

Herewith is presented the Fifty-fifth Annual Report of Vital Statistics for the Province of Ontario.

POPULATION

The estimated population for 1924 is 3,062,150. The population was distributed as follows:

City municipalities	1,231,036 or 40.2%
Towns of over 5,000 population	163,822 or 5.4%
Rural (including towns and villages under 5,000 population)	1,667,292 or 54.4%

BIRTHS

	1924	Ratio	1923	Ratio
Entire Province	71,510	23.3	70,056	23.1
Cities	30,857	25.0	30,334	24.9
Towns	5,071	30.9	4,911	30.3
Rural	35,582	21.3	34,810	23.1

There was a numerical increase of 1,454, which more than offset the decrease of 1,264, which was the decrease in 1923 over 1922. Indeed both the number of births and the rate were the lowest in the five-year period, 1920-1924.

For the decade 1915-1924, the number and ratio per 1,000 of population were as follows:

Year	Births	Ratio	Year	Births	Ratio
1915	67,032	24.9	1920	72,511	25.1
1916	65,264	23.9	1921	74,152	25.3
1917	62,666	22.6	1922	71,320	23.9
1918	64,729	23.0	1923	70,056	23.1
1919	62,774	22.0	1924	71,510	23.3

There were 36,582 male births and 34,928 female, being 104.6 males to 100 females or 51.1% males and 48.9% females.

NATURAL INCREASE PER 1,000 OF POPULATION

Year	Births	Deaths	Natural Increase	Ratio	Year	Births	Deaths	Natural Increase	Ratio
1915	67,032	33,294	33,738	12.5	1920	72,511	40,440	32,071	10.7
1916	65,264	35,580	29,684	10.9	1921	74,152	34,551	39,601	13.5
1917	62,666	33,284	29,382	10.6	1922	71,320	34,034	37,286	12.5
1918	64,729	43,038	21,691	7.7	1923	70,056	35,636	34,420	11.4
1919	62,774	34,010	28,764	10.0	1924	71,510	33,078	38,432	12.5

In the New Zealand official Year Book, 1925, appears a table showing that in the matter of natural increase, Ontario is exceeded by South Africa, Australia, New Zealand, Uruguay, Netherlands, Denmark and Norway, and exceeds the rate of United States registration area, Jamaica, Japan, Scotland, England (and Wales), Chile, Ceylon, Sweden, Northern Ireland, Spain, Switzerland, Bulgaria, Portugal, Finland, Germany, Belgium, Italy and France, in the order named.

Canada	1922	22.1
Ontario	1924	23.1
United States	1923	22.4
England and Wales	1924	18.8
Scotland	1923	22.8
South Africa	1923	27.6
Australia	1923	24.5
New Zealand	1923	23.0

BIRTHS BY AGES OF PARENTS

There were more babies born to fathers of twenty-nine years and to mothers of twenty-eight years than any other ages. The peak-age group of the mothers might be expected to fall in the earlier years and, indeed, the 24 year group is a close second. In the illegitimate births, however, the 18 year group holds the largest number of births. The five years, 17-21, account for practically 49% of all such births. (See table on page 6.)

ILLEGITIMATE BIRTHS

There were 1,717 such births in 1924, giving a ratio of 24.2 per 1,000 living births, being 1.7 higher than the rate for 1923.

1919	634	607	1,241	19.8	1924	923	794	1,717	24.2

Mean rate for the decade, 20.94 per 1,000 living births.

In one year only of the decade, 1916, did the female births exceed the male, and in 1921 they were even.

MULTIPLE BIRTHS

There were 1,588 twins born, 793 boys and 795 girls. Of the 24 triplets, making 8 cases, 14 were boys and 10 girls.

STILL-BIRTHS

There were 2,594 still-born children registered as births and 2,648 as deaths. Theoretically they should be the same but it has proven to be impossible, so far, to have all still-births registered as births and as deaths.

A study of the table following shows a lessening difference in the numbers. This is owing to the policy of the Department to "keep everlastingly at it" in trying to procure 100% registration of births.

Year	As Births	As Deaths
1915	2,246	2,807
1916	2,055	2,518

Towns	1,714	.. 10.4	1,780	.. 11.0
Rural	8,663	.. 5.1	8,641	.. 5.2

There was a decrease of 804 marriages during the year. This may have been and likely was due to the economic conditions which prevailed in 1924. The Department was aware of a large eflux of native sons and daughters to the U.S.A. by the demand for birth certificates for passport purposes. The reason for the unprecedented demand as given by applicants was that, no work being obtainable here, they were emigrating.

MARRIAGES BY AGES

This table found farther on in the report shows the ages of the contracting parties. It shows that there were more women married at the age of 19 years than any other individual age, viz., 2,319. The largest number of men at one individual age was 1,971 at 21 years. In 1923 the largest individual ages for the women and the men were 21 years. There were 26 men under 18 years who married and 878 women. There were 4 bridegrooms over 80 years and one bride over 75 years.

MARRIAGES BY DENOMINATIONS

A study of this table reveals a decided tendency for men and women to marry consorts of their own religious inclination or denomination.

There is always an interest displayed regarding mixed marriages, so-called, and usually thought of as a marriage between a Roman Catholic and one professing another faith. These tables show that of the 9,146 Roman Catholics who married during the year, 7,852 or over 85% married one another. Of those who went outside their own faith for partners, 583 were men and 711 women. This denomination has maintained about this proportion for many years.

Another form of mixed marriage is the Jew with the non-Jew or Christian. Of the 800 Hebrews who married, 778 or 97.25% intermarried. Of the small balance who married out of their faith, 15 were men and 7 women, thus reversing the order as compared with the Roman Catholics.

DEATHS

During the year there were registered 33,078 deaths. This was 2,558 fewer in number than those registered in 1924. The death rate also fell by 1.0 per 1,000 of population.

Of the above ten causes there has been a falling off in the rate of seven, the greatest reduction appearing in that of influenza, where the drop was from 69.2 in 1923 to 18.0 in 1924. There were increases in the rates in three cases, viz., Bright's disease, cancer and arterial diseases, there being an increase of 14% in the rate, which rose from 70.3 to 80.1. Cancer as usual, shows an increase.

TUBERCULOSIS

Deaths registered as from tuberculosis were 1,823, being a decrease of 166 and a reduction in the rate of 6.1 per 100,000 of population.

ORGANIC HEART DISEASES

As a cause of death, the organic heart diseases hold first place. It is demanding attention. The rate is to-day higher than that of any other individual disease, being 112.4 per 100,000 of population.

CANCER

In 1924 there were registered 2,946 deaths from cancer, being an increase of 222 in the number and 5.8 in the rate, which is now at 95.8 per 100,000 of population. The greatest number of deaths occurred in the 60-69 age group, when 29.3% of deaths occurred. The 70-79 age group followed next, and then the 50-59, these three groups taking a toll of 74% of all deaths from cancer. Deaths from cancer of the stomach took 34.7%, cancer of the breast, almost entirely confined to women, and of the female genital organs took 21.7%. There were fewer than 20% unspecified because of the greater interest taken in the combat against the disease and in the better inquiry instituted by the vital statistics branch.

It is interesting to compare the numbers of deaths by sex. Of the 162 deaths from cancer of the buccal cavity, 82.7% were males and 17.3% females; in cancers of stomach and liver, peritoneum, intestines and rectum and unspecified, there is not such a difference, the comparison being as 54.7 is to 45.3, the males predominating. But in cancer of the skin the males far exceed the female deaths, the ratio being 70.5% to 29.5%. On the whole the ratio was 45 males to 55 females.

COMMUNICABLE DISEASES

Among deaths from the communicable diseases there is a falling off in the death rate in typhoid fever, whooping cough and influenza, a slight rise in diphtheria and smallpox, a decided increase in measles, while scarlet fever remains stationary. Influenza as a cause was considerably lower but still higher than in 1917.

INFANT MORTALITY

There was a decrease in the number of deaths and the rate among children under twelve months of age, the rate falling from 84.9 in 1924 to 75.7 in 1925, the lowest rate ever experienced by the Province.

REPORT UPON
Births, Marriages and Deaths
FOR THE YEAR 1925

Herewith is presented the Fifty-sixth Annual Report of Vital Statistics for the Province of Ontario.

It will be noted that the report appears in a new form. There is a large increase in the number of tables presenting summaries, while the tables giving details of individual deaths for county, city and town municipalities as formerly, are discontinued, excepting for the four largest cities, Toronto, Hamilton, Ottawa and London. No information is lost, however, in the change and a great deal more is presented in the larger number of tables than was formerly the case.

POPULATION

The estimated population for 1925 is 3,103,000. This is a numerical increase of 40,850, being approximately 1.58 per cent. over the preceding year. The distribution was as follows:

City municipalities	1,276,343 or 41.10
Towns of over 5,000 population	191,846 or 6.17
Rural (including towns and villages under 5,000 population)	1,629,811 or 52.73

BIRTHS

	1925	Ratio	1924	Ratio
Entire Province	70,122	22.6	71,510	23.2
Cities	30,938	24.2	30,857	25.0
Towns	5,536	28.8	5,071	30.9
Rural	33,639	20.6	35,582	21.3

There was a numerical decrease of 1,388 and a decrease of 0.7 in the rate.

For the decade 1916-1925, the number and ratio per 1,000 of population were as follows:

Year	Births	Ratio	Year	Births	Ratio
1916	65,264	23.0	1921	74,152	25.3
1917	62,666	22.6	1922	71,320	23.0
1918	64,729	23.0	1923	70,056	23.1
1919	62,774	22.0	1924	71,510	23.3
1920	72,511	25.1	1925	70,122	22.6

There were 36,098 male and 34,024 female births, being 105.7 to 100 female births or 51.5 per cent. of all births were males and 48.5 were females.

ILLEGITIMATE BIRTHS

(See Table No. 4)

There were 1,881 illegitimate births, this being at the rate of 26.8 per 1,000 living births. This rate is 2.6 higher than for 1924.

MULTIPLE BIRTHS

(See Table No. 4)

Table Number 4 shows that there were 725 cases of twins and six cases of triplets. Of the twins 760 were males and 690 females and of the triplets eight were males and ten females. All these were living births. Actually there were 815 cases of twins. This leaves a balance of ninety pairs. Of this ninety, in sixty-five cases, one of the children was still-born and one born alive, in which case the living birth was classified in the total living births; in twenty-five cases, both children were still-born, and these, along with the sixty-five still-born, where one was also born alive, were all classified as still-births. Of the triplets there were actually seven cases, in six of which all the children were born alive and in one case all the children were dead born and classified accordingly.

The following table analyses the multiple births:

STILL-BIRTHS

There were 2,780 still-born children registered as births, and 2,774 as deaths.

BIRTHS BY AGES OF PARENTS

(See Table No. 5)

In 1924 the largest number of infants were born to fathers of twenty-nine years of age, while this year the largest number of births were to fathers of thirty years of age. The largest number of mothers were twenty-five years of age. The twenty-year decade of mothers accounts for 52.2 per cent. of all births.

1920	29,104	10.0	1925	23,074	7.4

There was a decrease of 964 marriages during the year which was also a decrease of 0.4 in the rate and is the lowest rate since 1918. The decline in the birth rate and marriage rate is due, no doubt, to the economic conditions prevailing in the year 1925. The cost of living was high and a large number of residents of our country emigrated to the U.S.A.

(See tables 10 to 16 inclusive)

DEATHS

During the year there were registered 33,960 deaths giving a rate of 10.9 per 1,000 of population. This is practically the same rate as last year, the increase being but 0.1, although an increase of 882 in the actual number of deaths.

TUBERCULOSIS

There were 1,842 deaths from tuberculosis, giving a rate of 59.3 per 100,000 of population. This is still another decrease in the rate, although a small one being but 0.2. The declining rate of tuberculosis extends back over a long period of years, showing that the disease is well under control.

The following table shows deaths for a decade by ages:

A slight rise has occurred in typhoid fever and a considerable rise in influenza. A satisfactory decline is indicated in all the other diseases mentioned.

INFANT MORTALITY

(See tables 1, 2, 2a, 2b)

During the year there were 5,530 deaths of children under one year of age, 20.4 per cent. of whom died under one day and 38.3 under one week (see table 18), the most of which deaths were due to premature births and debility. In the later weeks and months diarrhoea and enteritis was the most effective, followed by the respiratory group. A complete analysis of causes by ages will be found in table 20.

The infant mortality rate was 78.8 per 1,000 living births, which is 3.1 higher than for 1924 but 6.1 lower than for 1923 and with the exception of 1924 is the lowest for some time.

The following table shows the number of deaths for a decade together with the rates and the principal causes:

CANCER

The increasing prevalence of cancer is causing no little concern in Canada, as, indeed, it is throughout the civilized world. The rate per 100,000

of population for 1925 is 95.1 which is 0.7 less than for 1924. The following table shows deaths from the various types of cancer for a decade:

GENERAL

During the year an important change took place in this Branch in that it was transferred from the Provincial Secretary's Department, under which it had functioned for many years, to the Department of Health.

Certificates and Fees

The work of this branch has increased enormously in so far as the issuing of certificates is concerned. Approximately 30,000 certificates were issued during the year.

An important change which took place during the year, to be exact on October 6th, was an amendment in the fees for service. Up to this date the fee for a search covering a three-year period for one registration was 25 cents, and for a certificate 50 cents in addition to this fee. On October 6th the fees became 50 cents for a search covering the same period and $1 additional for the certificate. With the increase of the fees for official certificates the department decided to make searches for mothers' allowances purposes and for pension insurance purposes in the cases of returned soldiers without any charge whatever.

Old Records

While the branch has no records of births or deaths prior to July 1st, 1869, the date on which registration of births, marriages and deaths became legally effective, the branch had for many years marriage registers which had been gathered from some sources now forgotten, which date back in some cases to the "forties." These do not by any means constitute anything like complete records but such as they are they are now available. Although they had been in possession of the branch so long they had not until recently been indexed for adequate search. The following is a list of these:

BIRTHS BY AGES OF PARENTS

(See Table No. 6)

In 1926 the largest number of infants were born to fathers of thirty years of age, and the largest number of mothers were twenty-six years of age. The twenty-year decade of mothers accounts for 52.2 per cent. of all births.

There was an increase of 558 marriages during the year, which was also an increase of 0.1 in the rate.

(See Tables 11 to 17, inclusive, for months, ages, conjugal conditions, nativity, etc.)

DEATHS

During the year there were registered 35,909 deaths, giving a rate of 11.4 per 1,000 of population. This is an increase over last year, the increase being 0.5, being an increase of 1,949 in the actual number of deaths.

TUBERCULOSIS

There were 1,835 deaths from tuberculosis, giving a rate of 58.3 per 100,000 of population. This is still a decrease in the rate, being 1.0.

The following table shows deaths for a decade by ages:

COMMUNICABLE DISEASES

The following table shows the number of deaths and rate per 100,000 of population for the communicable diseases:

	1917		1918		1919		1920		1921		1922		1923		1924		1925		1926

It will be noted that there is a decided decline in the deaths from typhoid fever, the rate being the lowest in the decade, and, as a matter of fact, the lowest in the history of the Province. This would appear to be an indication of the value of sanitary engineering. The number of deaths from smallpox and the rate are the same as for the preceding year. There was a decided increase in the number of deaths from measles. The rate and deaths from scarlet fever is lowest when it was the same. The rate and deaths from diphtheria is likewise the lowest in the history of the Province. The number of deaths from influenza would indicate that another epidemic swept over the Province, the rate being the highest since the epidemic of 1920.

INFANT MORTALITY

(See tables 1, 2, 2a, 2b, 18 to 24)

During the year 1926 there were 5,302 deaths of infants under one year of age, 52.1 or 3,032 being males and 47.9 or 2,270 females. 22.0 per cent. under one day and a further 19.6 per cent. over one day and under one week. The largest individual cause is premature births which took 29.3 per cent. of all births under one. As is usually the case deaths from diarrhoea exacted the next largest total, the deaths from this disease showing its greatest force in the third, fourth and fifth month. The following table shows the principal causes of death:

CANCER

The number of deaths from this disease continues to increase, the total number being 3,116 and the rate 99.0 per 100,000 of population, being the highest point reached.

The following table shows the distribution of deaths from the various types according to class as follows:

MATERNAL MORTALITY

The number of deaths from puerperal causes in 1926 was 381, giving a rate of 5.34 per 1,000 births (including stillbirths), being seven more than in 1925, but with a slight increase in the death rate.

The number of deaths from individual puerperal causes may be found on pages 222-3.

The following table gives for a period of ten years the number of deaths for the Province, City and Town (over 5,000 population) municipalities and for the Province, exclusive of the urban centres.

NOTE. — In computing these rates, the stillbirths were taken into consideration.
